

TOMOTHERAPY[®] H[™] SERIES

INTRODUCING:

TomoH[™] System • TomoHD[™] System • TomoHDA[™] System

The TomoTherapy H Series, the premier solution for the entire spectrum of radiation therapy — that delivers dose only where you need it — *now* with outstanding speed, performance and simplicity. *Allowing you the freedom to choose the very best treatment for each of your patients — with confidence and without compromise.*

CLINICAL EXCELLENCE

- Treats a full spectrum of radiotherapy patients without compromise
- Enables planning and delivery of highly sculpted dose distributions

PATIENT FOCUSED

- Facilitates seamless daily CT image guidance for precise patient positioning, margin reduction and adaptive planning
- Provides personalized and consistent treatments for every patient
- Spares more normal tissue, helping to reduce side effects

ECONOMIC IMPACT

- Schedule your radiation therapy patients in conventional time slots
- Fast and flexible treatment planning for each individual patient
- Automated quality assurance

TOMOTHERAPY® H™ SERIES

The **TomoHDA™ System** - the ultimate flexibility in treatment delivery with unrivaled dose conformality, faster patient treatments, and faster concurrent treatment planning. It grants every patient access to high quality treatment

- TomoEDGE™ spares more normal tissue while enabling increased throughput — with unprecedented quality
- High performance VoLO™ planning provides flexibility, speed, efficiency and interactivity for concurrent treatment planning
- Expand your practice by efficiently treating patients that are difficult to treat with conventional radiation therapy equipment

The **TomoHD™ System** - the full spectrum solution for any Radiation Oncology center, providing high quality treatments to every patient for any clinical indication requiring radiotherapy

- TomoHelical™ and TomoDirect™ modalities to enable delivery of individualized treatments for both routine and complex indications
- VoLO planning provides the ultimate in flexibility, speed and efficiency with real time interactive planning
- The clinical solution when accuracy, flexibility and efficiency cannot be compromised

The **TomoH™ System** - the gold standard for image guided IMRT treatment delivery maximizes both conformality and target dose uniformity

- CTrue™ image guidance provides daily 3D CT target localization and enables margin reduction while sparing healthy tissue
- Ultra-fast binary MLC enables unprecedented intensity modulation
- Excellent target homogeneity while sparing more normal healthy tissue

Created to make personalized treatments an option for radiation therapy, the TomoTherapy H Series offers interactive planning and efficient delivery of highly sculpted doses for personalized and consistent treatments. Seamless daily CT image guidance provides precise patient positioning, margin reduction and adaptive planning and enables pinpoint dose accuracy for every radiation therapy patient.

Treat tumors with confidence and without compromise
